Understanding Instrument Grades

Utensils (Forceps, Scalpel Handles, Scoops, and Scissors) sold by *Phyto*Technology Laboratories are available in three different grades: Utility, Research, and Premium.

Utility Grade	Research Grade	Premium Grade
Affordable utensils for your entire lab. Utility grade utensils may be more prone to wear over time, but will be the most cost effective tools for your lab.	The best balance of quality and cost. Research grade utensils will have a longer life than Utility grade utensils with higher quality components and machining.	Premium grade utensils are the best of the best. High quality materials, expert machining, and precise craftsmanship produces a balanced and precise utensil for your research and lab needs.

Clean Room Supplies

Picking the Right Disposable Gloves

Unless otherwise noted, all gloves come in packages of 100 each, and are available as either small, medium, large or extra-large gloves. Gloves are available in three different materials and can come with or without cornstarch powder by preference.

Latex	Nitrile	PVC
Latex gloves are good for handling biological and water based materials, but offer little chemical protection and do not readily show tears or punctures. Some people may be allergic to latex.	Nitrile gloves are excellent general use gloves, they tear visibly when punctured and are resistant to most chemicals used in tissue culture research.	Polyvinyl Chloride (PVC/PVC Vinyl) gloves are durable, abrasion-resistant gloves that provide good protection against acids, bases, and peroxides but are less resistant to organic solvents.
